S/4 HANA Public Cloud Implementation for a Self-Driving Car Giant (India, Poland & Japan Rollouts)

About Client

Our client is dedicated to the advancement of autonomous vehicle technology, with the primary goal of enhancing transportation safety for individuals. The client is a subsidiary of a global technology giant that influences numerous facets of contemporary living. The parent company is a multinational pioneer in internet-based products and services, known for its ubiquitous search engine. It has a market capitalization exceeding \$1 trillion, earning it a place in the top 10 on the Fortune 500 list.

The client has been actively engaged in self-driving car research since 2009 and has successfully conducted trials on public roads in multiple U.S. cities. Furthermore, the company envisions introducing a commercial ride-hailing service utilizing autonomous vehicles.

Executive Overview

In early 2022, Techwave initiated a collaboration with the client for an SAP S/4HANA Public Cloud implementation project. While the client had already deployed S/4HANA for its operations in the U.S., U.K., China, and Taiwan, they sought a partner with deep knowledge of local compliance and business processes for their expansion into India, Poland, and Japan.

For India and Poland, Techwave supported the activation of legal entities in the existing SAP S/4HANA Public Cloud environment, covering core finance, procurement, supplier onboarding in Ariba, bank accounting, and reporting. Building on this foundation, the Japan rollout expanded the client's global ERP transformation by enabling SAP S/4HANA Cloud Public Edition for finance, treasury, procurement, banking, Ariba integration, and intercompany stock transfer processes. Through proactive planning, strong scope governance, a fit-to-standard methodology, and a clean-core approach, Techwave helped the client streamline operations, support local compliance, improve financial visibility, and create a scalable foundation for future global rollouts.

Client's Challenges

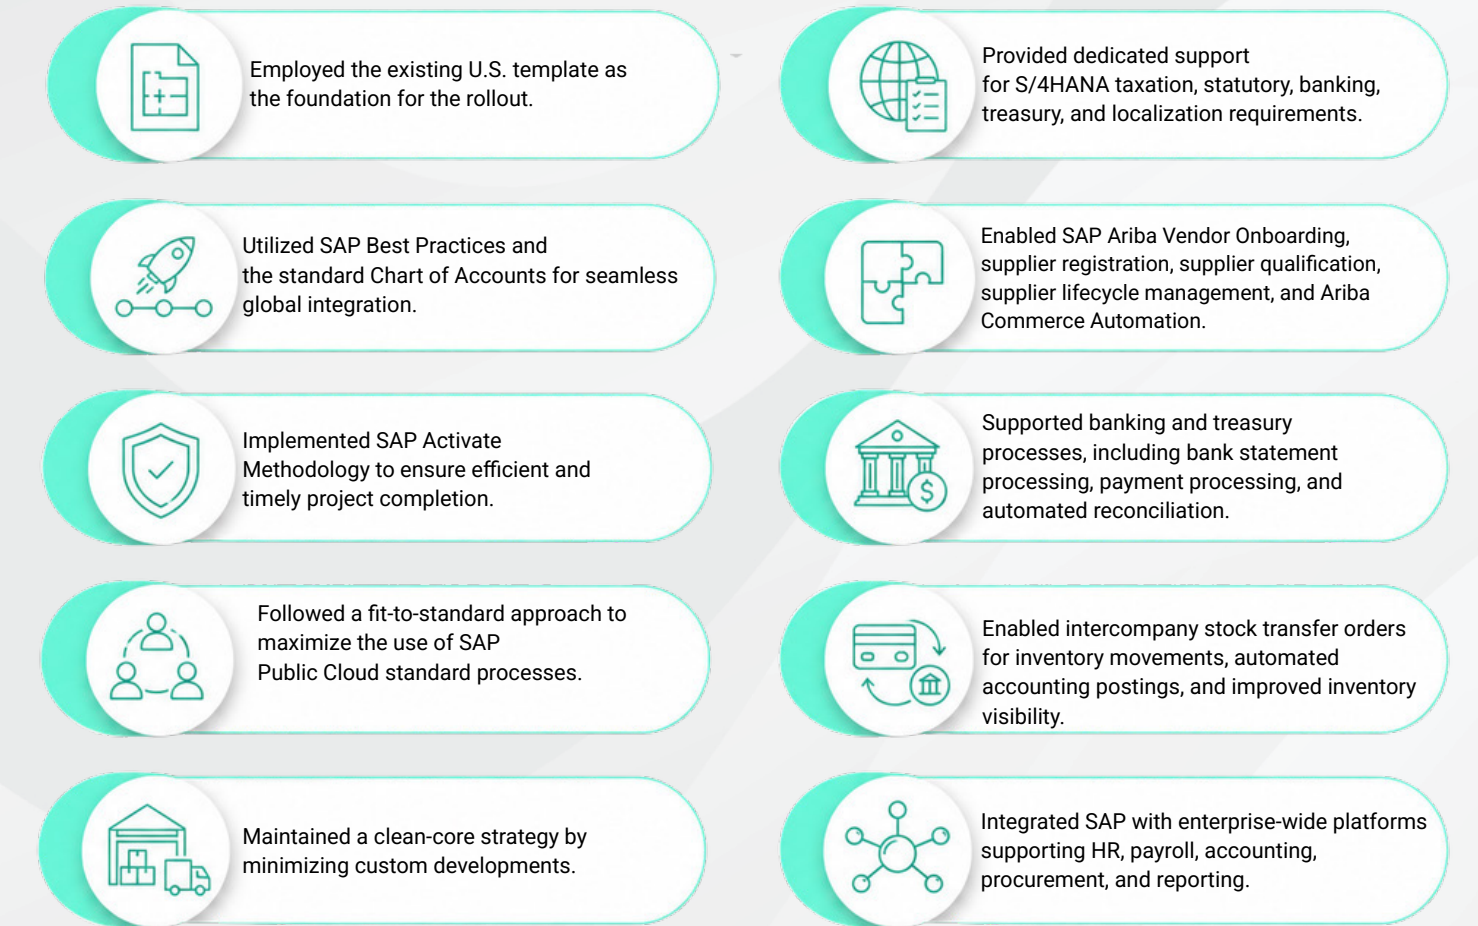

The client needed a skilled SAP technology partner to configure and enhance essential business functions across FI, CO, MM, Ariba, banking, treasury, procurement, and localization for India, Poland, and Japan.

Key Challenges

Techwave's Strategy & Solutions

Techwave demonstrated its reliability and SAP expertise by delivering a structured rollout approach across India, Poland, and Japan. To meet the client's specific needs, Techwave conducted the following activities

Business Impact

The partnership between the client and Techwave resulted in the successful implementation of SAP S/4HANA Public Cloud across India, Poland, and Japan. Driven by a customer-centric approach, Techwave delivered the following outcomes:

Streamlined finance and procurement processes across multiple countries.

Ensured 100% compliance with local statutory and regulatory requirements.

Achieved 100% go-live readiness.

Automated banking, reconciliation, procurement, and supplier onboarding processes, while improving reporting visibility and operational efficiency.

Enabled end-to-end Ariba procurement integration for direct and indirect procurement.

Improved financial controls, transparency, and reporting visibility.

Supported intercompany inventory movements and automated accounting postings.

Seamlessly integrated SAP with enterprise applications.

Successfully went live in less than a year.

Created a scalable SAP Public Cloud template for future global rollouts.
